

Overview of the core business cloud system "Kumo no uchusen"

"Kumo no uchusen" ("Starship Cloud") is a cloud computing system developed by Nichigas in order to streamline work in the LPG industry.

Simultaneously with streamlining, it also contributes to the accuracy of "safety," the most important element. Based on our daily utilization of the "Kumo no uchusen" business system in our work, we are confident that it will be an extremely valuable system in the energy industry in the future.

With the goal of making it useful to the development of the energy industry as a whole, we have established a company to market the system in a manner that is flexible as well as easy for your company to implement and use, and we propose and provide solutions and consulting.

●Revolutionizing distribution, streamlining the workforce

Makes it easier to manage hub terminals, depot bases, and customer information, leading to the streamlining of business and the workforce.

●Streamlining management work, reducing operating costs

Enables unified management of customer information and a variety of other data, the transition to paperless operation through making inquiries by smartphone, and extensive cost reduction. Further, it reduces safety risks such as personal information leaks.

●Streamlining safety operations

Instructions for improvement are automatically given for the results of safety checks, thereby guaranteeing our customers' safety and enabling rapid response.

●Potential for development

Smartphones are used as the terminal. The continuous evolution of apps leads to new improvements in on-site work.

In order to utilize the "Kumo no uchusen" business system for the energy industry, Nichigas will deploy the "LPG Foundry Concept" to operate and streamline a variety of work and bases while moving past company walls.
